

Job Title: Network – Security Engineer – Tier 2	Location: Albany, NY
--	----------------------

This is a once in a lifetime opportunity! This is a chance to get ahead by leaps and bounds.

At QoS Networking, you will gain the broadest knowledge in IT. And when you do, you will become the asset all customers need and desire. And check out the benefits that QoS Networking offers. We don't believe they can be matched anywhere.

**In this position you will start with a 6-month project and then begin support for two of our customers - see below for descriptions and functions.*

6 Month Project - Project Description

In this project you will work as a Tier 2 network engineer to help migrate a large data center from Cisco ASA 5585 appliances running Cisco Firepower IPS to Palo Alto NGFW appliances. In addition to the Cisco to Palo migration, you will assist in building a new Cloud DR solution using virtual Cisco Routers and Palo Alto NGFW systems.

You will work with Cisco and Palo Alto equipment. The specific product lines supported are the Cisco Nexus 7ks, 9ks, ASA 5585 appliances with Firepower blades, Catalyst 3850 Layer 3 switches and Palo Alto 5220 NGFW appliances. There is also a large Cisco Meraki wireless network.

Customer #1 – Position Description

In this position you will work as a Tier 2 network engineer to help build a new Cisco data center for the largest enterprise network in the Albany area. You will have the opportunity to assist with the merging of multiple enterprise networks into this large enterprise network.

During the enterprise mergers, and the building of the new data center, you will create network upgrade and migration plans and create Visio drawings to support these efforts.

You will work primarily with Cisco equipment. The specific product lines supported are the Cisco Nexus 7ks, ASA security appliances, Firepower NGFW appliances, Identity Services Engine (ISE), Catalyst 3850 and 9300 Layer 3 switches and Cisco 8540 Wireless Lan Controllers.

The enterprise has one of the largest Wireless networks with over one thousand APs.

The data center design includes the latest Cisco Nexus platforms and Cisco Security products.

Customer #2 – Position Description

In this position you will work as a Tier 2 network engineer to support a multi-location healthcare provider. In addition to supporting the network you will be involved in the upgrade and build-out of the Enterprise LAN, WAN, Data Center and DR networks.

You will work with Cisco and F5 equipment. The specific product lines supported are the Cisco Nexus 9ks, ASA security appliances, Firepower NGFW, appliances, Identity Services Engine (ISE), Catalyst 9300 Layer 3 switches. There is also a large Cisco wireless network which was recently migrated to Meraki.
